

AMENDMENTS TO THE CLAIMS

I claim:

Claims 1-15 (cancelled)

Claim 16 (previously presented) A leveling system for a reversing assembly comprising:

a lift arm assembly;

a pair of lift chains attached at a first end of each lift chain to said lift arm

assembly;

a leveling carriage directly attached to a second end of each lift chain;

a reversing table rotatably attached to said leveling carriage; and

a frame rotatably attached to said reversing table and separately rotatably attached to said leveling carriage.

Claim 17 (previously presented): The leveling system of claim 16 further comprising actuator means for adjusting the angle of said reversing table with respect to said frame.

Claim 18 (previously presented): The leveling system of claim 16 wherein a first connector attaches said reversing table to said leveling carriage between a first position on said reversing table and a first position on said leveling carriage and a second connector attaches said reversing table to said leveling carriage between a second position on said reversing table and a second position on said leveling carriage, wherein the distance between said first position on said reversing table and said first position on said leveling carriage is equal to the distance between said second position on said reversing table and said second position on said leveling carriage.

Claim 19 (previously presented): The leveling system of claim 18 wherein said first connector and said second connector are a pair of parallel bars.

Claim 20 (previously presented): The leveling system of claim 18 wherein the distance between the point at which said leveling carriage attaches to said frame and the point at which said frame attaches to said reversing table is equal to the distance between said first position on said reversing table and said first position on said leveling carriage.

Claim 21 (previously presented): The leveling system of claim 16 wherein said leveling carriage attaches to said frame and said pair of attachment members at any of a plurality of positions.

Claim 22 (previously presented): The leveling system of claim 16 wherein said frame is an A-frame.

Claim 23 (previously presented): A leveling system for a reversing assembly comprising:

- a lift arm assembly;
- a pair of attachment members attached at a first end of each attachment member to said lift arm assembly;
- a leveling carriage directly attached to a second end of each attachment member;
- a reversing table rotatably attached to said leveling carriage; and
- a frame rotatably attached to said reversing table and separately rotatably attached to said leveling carriage, wherein a first connector attaches said reversing table to said leveling carriage between a first position on said reversing table and a first position on said leveling carriage and a second connector attaches said reversing table to said leveling carriage between a second position on said reversing table and a second position on said leveling carriage, wherein the distance between said first position on said reversing table and said first position on said leveling carriage is equal to the distance between said second position on said reversing table and said second position on said leveling carriage.

Claim 24 (previously presented): The leveling system of claim 23 further comprising actuator means for adjusting the angle of said reversing table with respect to said frame.

Claim 25 (previously presented): The leveling system of claim 23 wherein said first connector and said second connector are a pair of parallel bars.

Claim 26 (previously presented): The leveling system of claim 23 wherein the distance between the point at which said leveling carriage attaches to said frame and the point at which said frame attaches to said reversing table is equal to the distance between said first position on said reversing table and said first position on said leveling carriage.

Claim 27 (previously presented): The leveling system of claim 23 wherein said leveling carriage attaches to said frame and said pair of attachment members at any of a plurality of positions.

Claim 28 (previously presented): The leveling system of claim 23 wherein said frame is an A-frame.

Claim 29 (cancelled)
